Programming: python, c, c++

PROJECTS

TRAIN TICKET MANAGEMENT oct-oct 2026

Mini project | Role: team member

Tech: Mysql, Python

- Train Ticket Management System* is a software application that automates how railway tickets are booked, managed, and tracked.
- It replaces manual counters and paperwork with a centralized database, so passengers and railway staff can handle everything quickly and accurately. *Key functions:* - *Passenger registration and login:* stores user details securely. - *Train search:* finds trains by source, destination, date, and class. - *Ticket booking:* reserves seats, assigns berths, and calculates

CERTIFICATIONS
